YOU CAN DO ANYTHING IN A ROYAL WOLF

CUSTOMISE • ACCESSORISE

WHIRLYBIRD

Royal Wolf can install or supply a whirly bird on your shipping container to provide ventilation. The whirly bird will also provide some cooling to the shipping container for areas where electricity and air conditioning is not an option.

AIR CONDITIONING

Royal Wolf can install a range of air conditioners into the shipping containers and portable buildings. Our air conditioner accessories have been specially designed in retractable frames making transportation easy.

VENTS

Minimise odours and increase natural air flow with the installation of vents. Royal Wolf can install small vents or larger steel louvered vents on any wall of a shipping container. Vents can also assist in reducing the temperature in hot shipping containers.

LOCK BOX

A lock box is a device that covers the padlock on the shipping container door. It provides extra security and weather protection for the padlock.

SHELVING

Accessorising your shipping container with shelving allows easy storage for items including business documents, archive boxes, tools and personal assets.

PLUMBING

Royal Wolf can install plumbing for sinks, toilets and showers to transform your shipping container into a portable building.

ELECTRICITY

Electricity allows the provision of lighting and ensuring your shipping container can be transformed into a practical environment for your needs.

PADLOCKS

Padlocks are a necessity on almost all shipping containers. Installed to prevent the doors from opening, padlocks help prevent thieves and vandals from accessing your possessions.

DOORS

By choosing to install a door on a shipping container, customers can easily access their unit and eliminate the need to open the double doors at the end of the container. With a variety of different doors to suit individual needs including roller doors, single and double side doors and sliding doors.

WINDOWS

Royal Wolf have a variety of window options available for shipping containers and portable buildings allowing natural lighting, ventilation and a clear line of sight. Many windows are manufactured with sliding glass panels. Security is maintained with a steel covering flap that simply pushes outwards when the window is open. Other window options include and security bars.

PAINTING

Painting and sign writing a shipping container allows the opportunity to promote your brand and products. Before any painting is completed, Royal Wolf will grind back any surface rust and repair any damage to the shipping container. Painting also prolongs the life span of the unit.

RAMPS

Ramps are ideal for minimising tripping accidents in products that have a large amount of pedestrian traffic. They are also useful for shipping containers that have products on wheels being moved in and out eg. wheelbarrows, cars, trolleys and bikes. Ramps are available as fixed or removable and can be located at any door opening.
